References

References must be numbered consecutively in the order they are first mentioned. Place each reference number in parentheses, throughout the text, tables, and legends. Use parenthetical superscripts, as in this example.[1] If the same reference is used again, re-use the original number.

In the Reference section of the manuscript, references must be listed in numerical order as they appear in the text. JBMR uses the Vancouver reference format for listing authors. Use the author's surname followed by initials without periods. For journal articles, list up to six authors. If there are more than six authors, list the first three, followed by "et al."
