

INDUSTRIAL TRAINING PROPOSAL

Affinis Techno Soft is a software development company in India. It has been operative independently since 2003 & recently been taken over by Affinis Engagements Pty. Ltd., a consultancy firm in Australia. Affinis Engagements is a Multi National Company successfully providing its services currently in Australia, USA, Canada and India.

The core line of activity at ATS is to develop customized application software covering the entire responsibility of performing the initial system study, design, development, implementation and training. It also deals with consultancy services and Electronic Security systems. Its primary clientele includes educational institutes, entertainment industries, resorts, theme parks, service industry, telecom operators, media and other business houses working in various capacities.

Affinis Knowledgeware, the Research Training and Development Department of Affinis Technosoft is a professional training Company offering IT enabled services & industrial trainings for B-Tech, MCA, BCA, MSc and MBA fresher's and experienced developers/programmers in various platforms.

Typically students undergo training on particular technology platforms of their choice. Thereafter they would be assigned a Team Leader and he/she is expected to execute a live project work under the guidance of a Project manager/analyst. At the end of the program each trainee would need to submit a 'Project Report' of the work done, and would also be required to make a presentation before the management.

Summer Training /industrial training will be provided for the students of BTECH (IT, CS, ECE) ME, MBA and MCA only. Deserving candidates may be awarded stipends, scholarships and other benefits, depending on their performance and recommendations of the mentors.

Please go through the profile below and fill up the registration form attached with this brochure for further information.

Does Technical Industrial Training at Affinis Knowledge ware make any difference?

Most students waste their precious time meant to get hand on experience on the latest technologies by either joining Training Institutes or Companies that are actually not developing software in house. Ask the following questions, before joining Training with any company:

- Is the company actually a Software Development Company? If not, you may end up wasting your six months and will rue your decision later.
- Is the company providing training on live projects? Companies may claim to provide training on live project whereas they may not be actively into the field of Software Development.
- Is the project live? Will the company host your project in real time or online? Can you present it to your perspective employer when you finally start giving interviews for your dream job?
- Is the company going to enrol you into actual Software Development environment? Many students opt to join multinationals or big companies only to find that they are made to work in departments such as Customer Support, Technical Support, Marketing, Survey/Data collection etc.
- What project the company is going to give you and will it help you learn the latest technologies?

Affinis Knowledge ware will provide you an opportunity to work with a team of Software Developers, under the guidance of project managers and senior programmers. The training includes both class room and practical job work. Once you learn the language and database basics, you will be asked to work on the actual project with real time coding.

Our core focus is to make the students well verse with the different cycles of Software Development and to provide them hand on experience on work place environment. Excellent performers may be offered jobs in Affinis Technosoft or associated companies

During the Six Months Training, Students will also go through special sessions on Career Guidance, How to face Interviews and Personality Development.

Introductory offer: Candidates who bring their own laptops during the training will receive 10% discount on project fees.
