

## AWIPS II Topic of the Week -- Local Application Inventory

All,

As part of the continued local applications migration from AWIPS I to AWIPS II activities, the Site Migration and the National Core Local Application Development Team (NCLADT) teams are in the process of developing a Local Application Inventory. For this inventory, the term "local application" encompasses three categories of site-added functionality:

- ❖ stand-alone and integrated applications;
- ❖ GFE additions, tools, procedures and utilities;
- ❖ Customization, including supplemental data and visualization

This inventory process is multi-phased and uses both the current Local Application Database (LAD) and Smart Tool Repository (STR). In preparation for the upcoming NCLADT Workshop, November 3-5, 2009 in Kansas City, the field developers will complete the local application inventory to be used as an AWIPS I baseline. Special thanks to the AWIPS Site Migration Lead Ashley Kells (OST/SEC) and NCLADT Lead John Olsen (OST/SEC) for their contributions. We're excited about the various migration activities and we look forward to the continued collaborations from the field. For more information about the Site Migration and NCLADT, please go online to the AWIPS Tech Infusion website ([http://www.nws.noaa.gov/ost/SEC/AE/Site\\_Migration.htm](http://www.nws.noaa.gov/ost/SEC/AE/Site_Migration.htm)).
