

## PRELIMINARY PROJECT PROPOSAL

**Project Title: "A bug's life"**

**Project Description:** This proposal's objective is to start a lecture during the process of fumigation in each part of a given community. It is obvious that fumigation operation alone cannot permanently eliminate the population of any infestation, but with the cooperation from residents themselves, pest control would be mostly attained, and it is achieved through a brief discussion and lecture of discipline. The community as we imagine it is really under the threat of different diseases carried by mosquitoes like malaria and dengue. This fumigation machines would go in the small passages in the Barangay especially those areas near the canals because they are more prone to mosquitoes. Maybe some people would think that this wasn't crucial but according to DOH (department of health) 42,207 dengue cases, 193 deaths from January to 1st week of June in the Philippines. This operation is done with the assistance and guidance from local pest control services accessible anytime and anywhere with the use of their ads.

**Target Beneficiaries:** localities living near polluted or infested areas, Barangay facilities and sectors

**Time Frame:**

1<sup>st</sup> Saturday Morning (8-10am): Lecture (What diseases they can get from pests manifestation)

2<sup>nd</sup> Saturday Morning (8-am): Fumigation Process

3<sup>rd</sup> Saturday Morning (8-am): Lecture (How to maintain the cleanliness and how to prevent pest manifestation)

4<sup>th</sup> Saturday Morning (8-am): after a week, the team will come back to the area and see if the citizens learned how to do the pest control that the group taught them.

**Materials and Means:** fumigation operators and machine, specifically 20-30 chairs, one white/black board
