# **“Financial Modeling for Startups”**

**April 02, 2003**

**Presented by:**

**Ramana Jampala**

**Principal, SAS Investors**

**[rjampala@sasinvestors.com](mailto:rjampala@sasinvestors.com)**

---

# Agenda

---

- **Objective of the discussion**
    - Significance of Financial Modeling
    - An Approach to Financial Modeling
    - Income Statements 101
    - Cash Flows 101
    - Case Studies
      - Case Study A (Pre-Investment Analysis)*
-

## Why should an entrepreneurs focus on Financial Modeling?

---

- Organizational and Business Process Design
  - Dynamics of Organizational Emphasis
  - Business Assumptions and Requirements Quantification
  - Metrics Definition and Variance Analysis
  - Goal Congruence and Communications Tool
-

# Organizational and Business Process Design

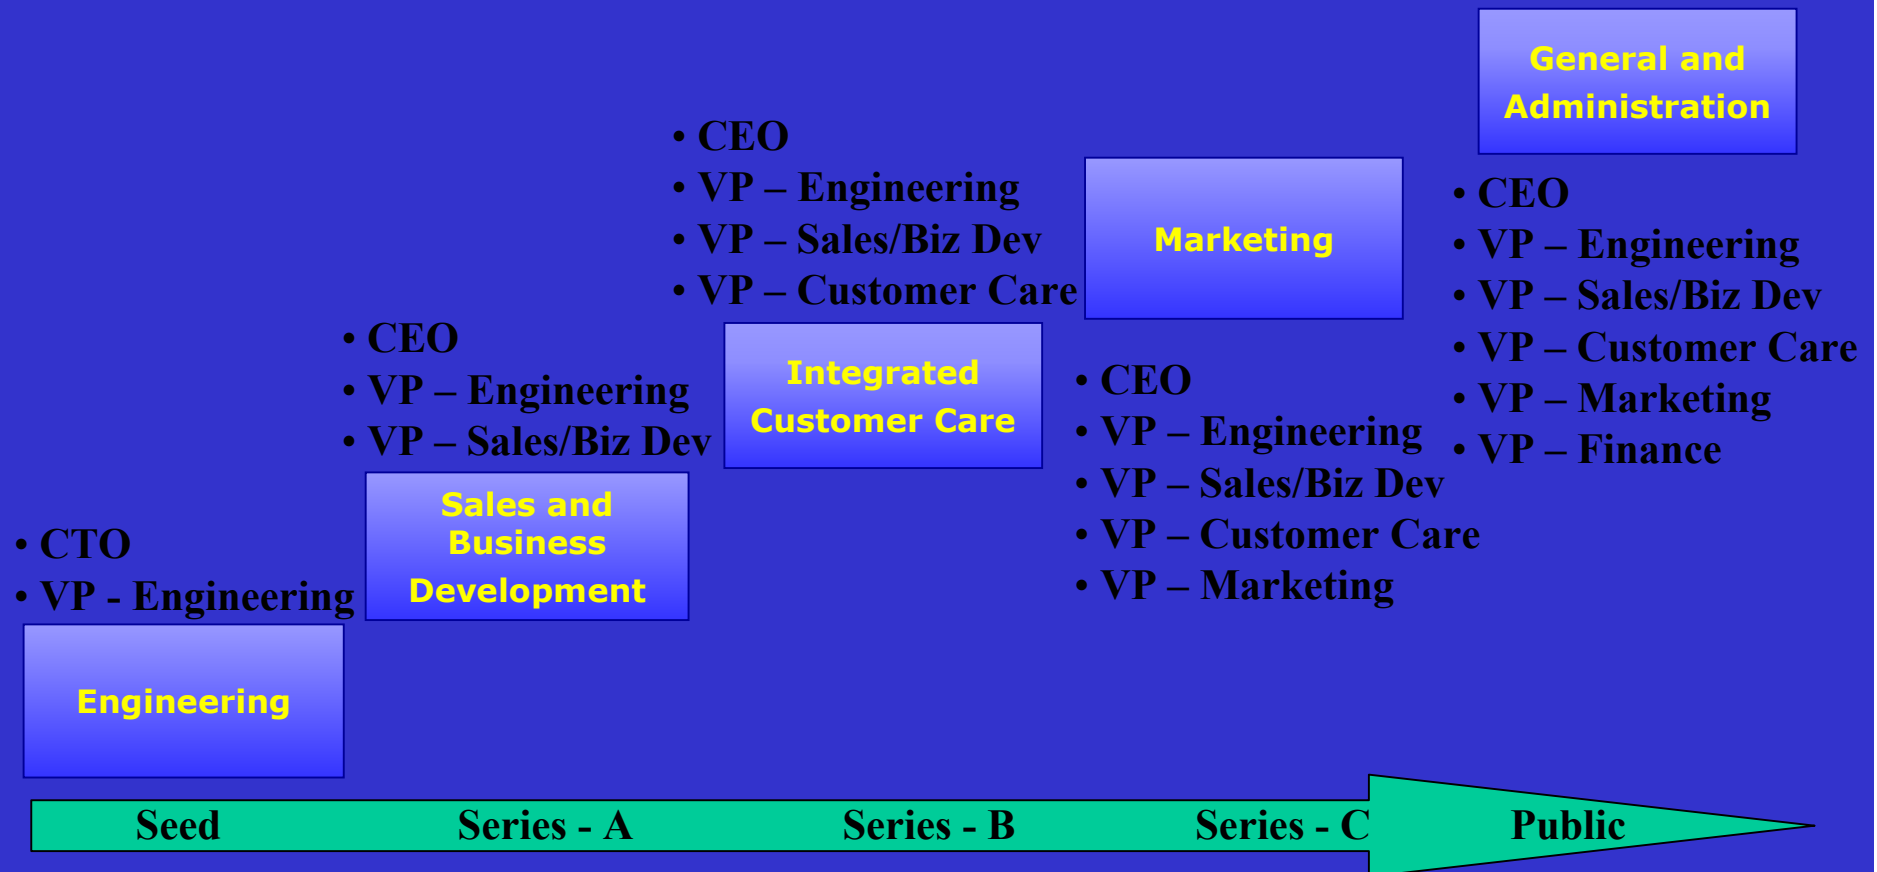

---

|                                       |  |
|---------------------------------------|--|
| <b>Engineering</b>                    | <ul style="list-style-type: none"><li>• Key business activities: Product development, emerging technology research, professional services support (functional analysis and user interface)</li><li>• Key Roles: Process Lead – VP Engineering. Lead assists – Directors for Emerging Technologies, Platforms, Integration and Development</li></ul>  |
| <b>Sales and Business Development</b> | <ul style="list-style-type: none"><li>• Key business activities: Direct Sales, Indirect sales through alliances and partnerships with Independent Software Vendors and System Integrators</li><li>• Key Roles: Process Lead – VP Sales / Business Development. Lead assists – Regional Sales Directors or Managers, Business Development Directors (Device/Carriers, System Integrators, ISVs, Technology)</li></ul> |
| <b>Marketing</b>                      | <ul style="list-style-type: none"><li>• Key business activities: Marketing Communications, Product Marketing, Investor Relations, Public Relations, Market Research</li><li>• Key Roles: Process Lead – VP Marketing. | <b>Cumulative Cash Inflows</b> |  | \$3,500 | <b>\$3,500</b> | \$8,700 | \$16,000 | \$22,700 | \$27,500 | <b>\$27,500</b> | \$31,700 | \$34,200 | \$34,200 | \$34,200 | <b>\$34,200</b> |

# Metrics Definition – To be carried out for all the defined scenarios, typically for third year of operations

---

## Direct Outputs

- Revenues (\$ and CAGR)
- Gross Income (% of Revenue)
- Operating Income (% of Revenue)
- Peak Negative Cash Flows (\$)

## Business Assumptions

- Sales Cycle
- Pricing Methodology
- Sales Projections and Revenue Mix
- Product Development Roadmap

## Derived Outputs

### Employee Productivity

- Revenue per Employee
- Revenue per Sales Employee
- Income per Employee

### Organizational Productivity

- Product Development / Revenue (%)
- Sales and Marketing / Revenue (%)

### Breakeven Analysis

- Quarters to breakeven
  - Cumulative burn
  - Scenario based cash requirements
-

# Business Assumptions Quantification

## Pricing and Projections

| Customers and License Revenue Summary |          |           |         |           |         |           |
|---------------------------------------|----------|-----------|---------|-----------|---------|-----------|
|                                       | 2001     |           | 2002    |           | 2003    |           |
|                                       | Pricing  | Customers | Pricing | Customers | Pricing | Customers |
| Small                                 | \$ 250   | 7         | 300     | 15        | 350     | 50        |
| Medium                                | \$ 500   | 3         | 500     | 18        | 600     | 60        |
| Large                                 | \$ 1,000 | 0         | 1000    | 4         | 1200    | 15        |
| Strategic                             | \$ 250   | 3         | 500     | 2         | 750     | 6         |
| Total*                                |          | 13        |         | 39        |         | 131       |

## Pipeline and Sales Cycle

| Assumptions                                   |       |       |
|---|-------|-------|
| Average Price (\$000s)                        | \$100 | \$150 |
| Number of prospects / Direct Sales Rep        | 7     | 10    |
| Number of prospects / Indirect Sales Rep      | 3     | 4     |
| Average Sales Cycle (months)                  | 3     | 3     |
| % of prospects rolling over                   | 30%   | 30%   |
| Conversion of prospects to clients (direct)   | 20%   | 20%   |
| Conversion of prospects to clients (indirect) | 33%   | 33%   |
| Operating Expenses Increase                   | 60%   | 40%   |

## Product Development

| Product Development Assumptions |       |      |                      |
|---------------------------------|-------|------|----------------------|
|                                 | Alpha | Beta | General Availability |
| Number of Quarters              | 2     | 5    | 7                    |
| Development Staff               | 12    | 20   | 30                   |
| Fully Loaded Cost (\$000s)      | \$1m  | \$3m | \$6m                 |

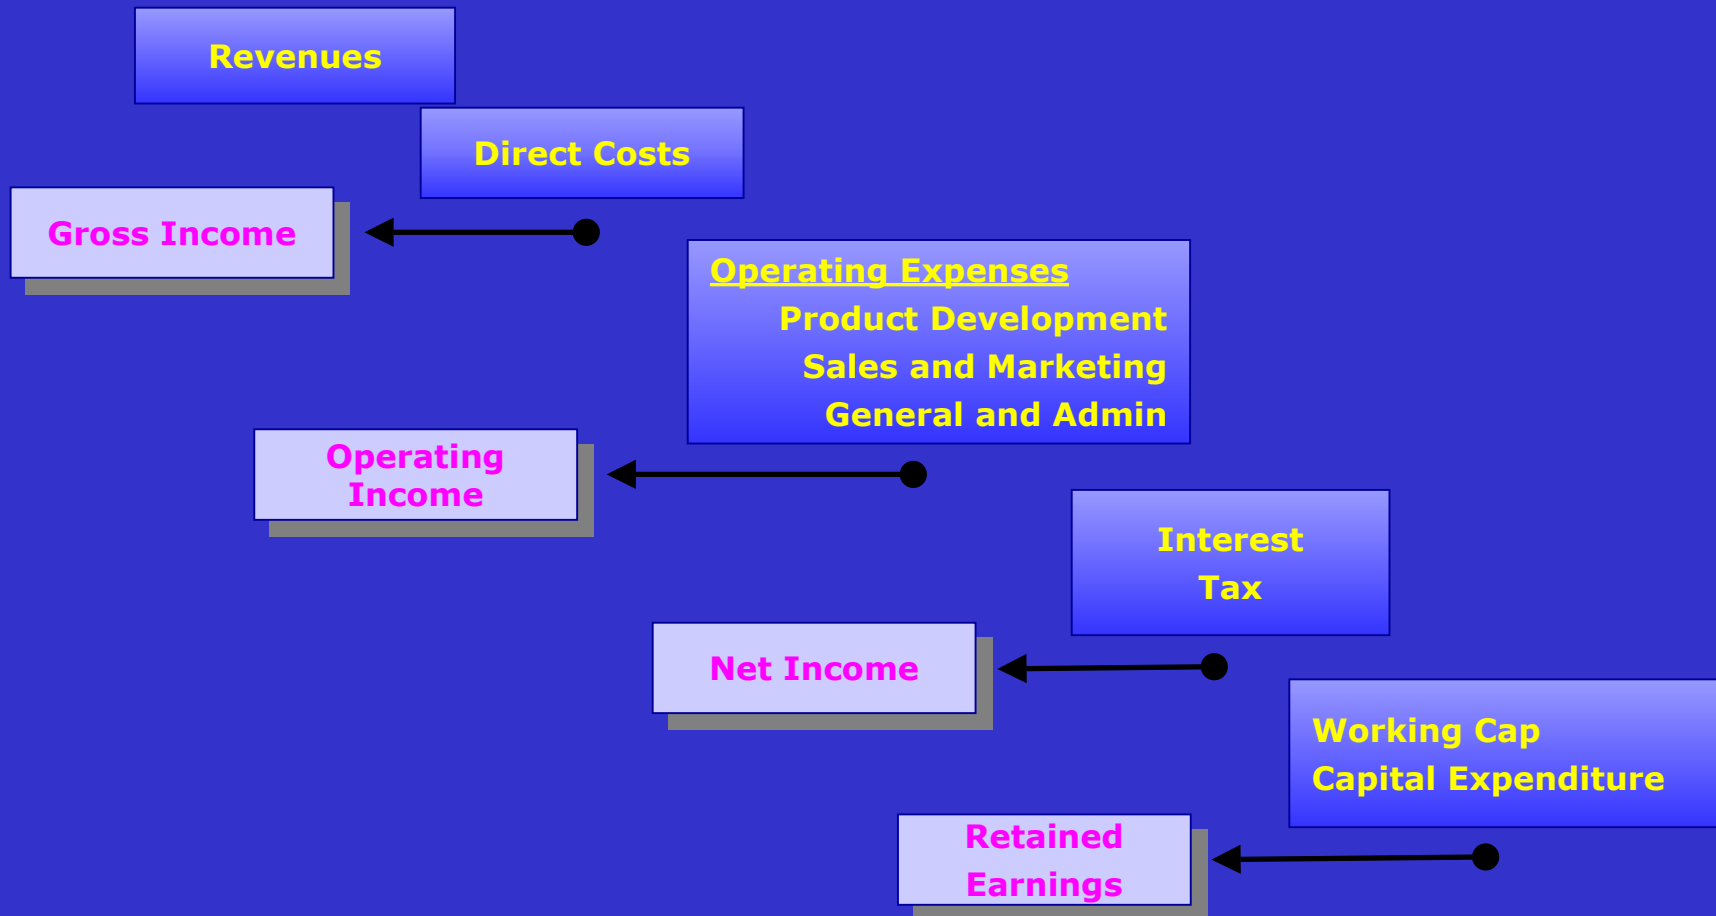

# Goal Congruence and Communications Tool

---

- **Growth versus value maximization:**
    - What is the cost of growth? (Metric: Revenues minus sum of product development and sales and marketing expenses)
    - What is the optimal growth strategy? (Hyper growth (200% CAGR over 3 years) with \$100m operating losses or Contained growth (100% CAGR over 3 years) with \$30-\$40m operating losses)
    - Which business processes should be in-house and which processes should be outsourced?
  - **Organization goal congruence:**
    - What are the two or three key metrics that the company will govern itself?
    - Synchronization between Sales, Marketing, Product Development and Customer Care departments
  - **Constantly changing markets:**
    - Operating plans and financial plans should be 3 Quarter moving plans
    - Need of a strategy team to be accountable for the adaptability
-

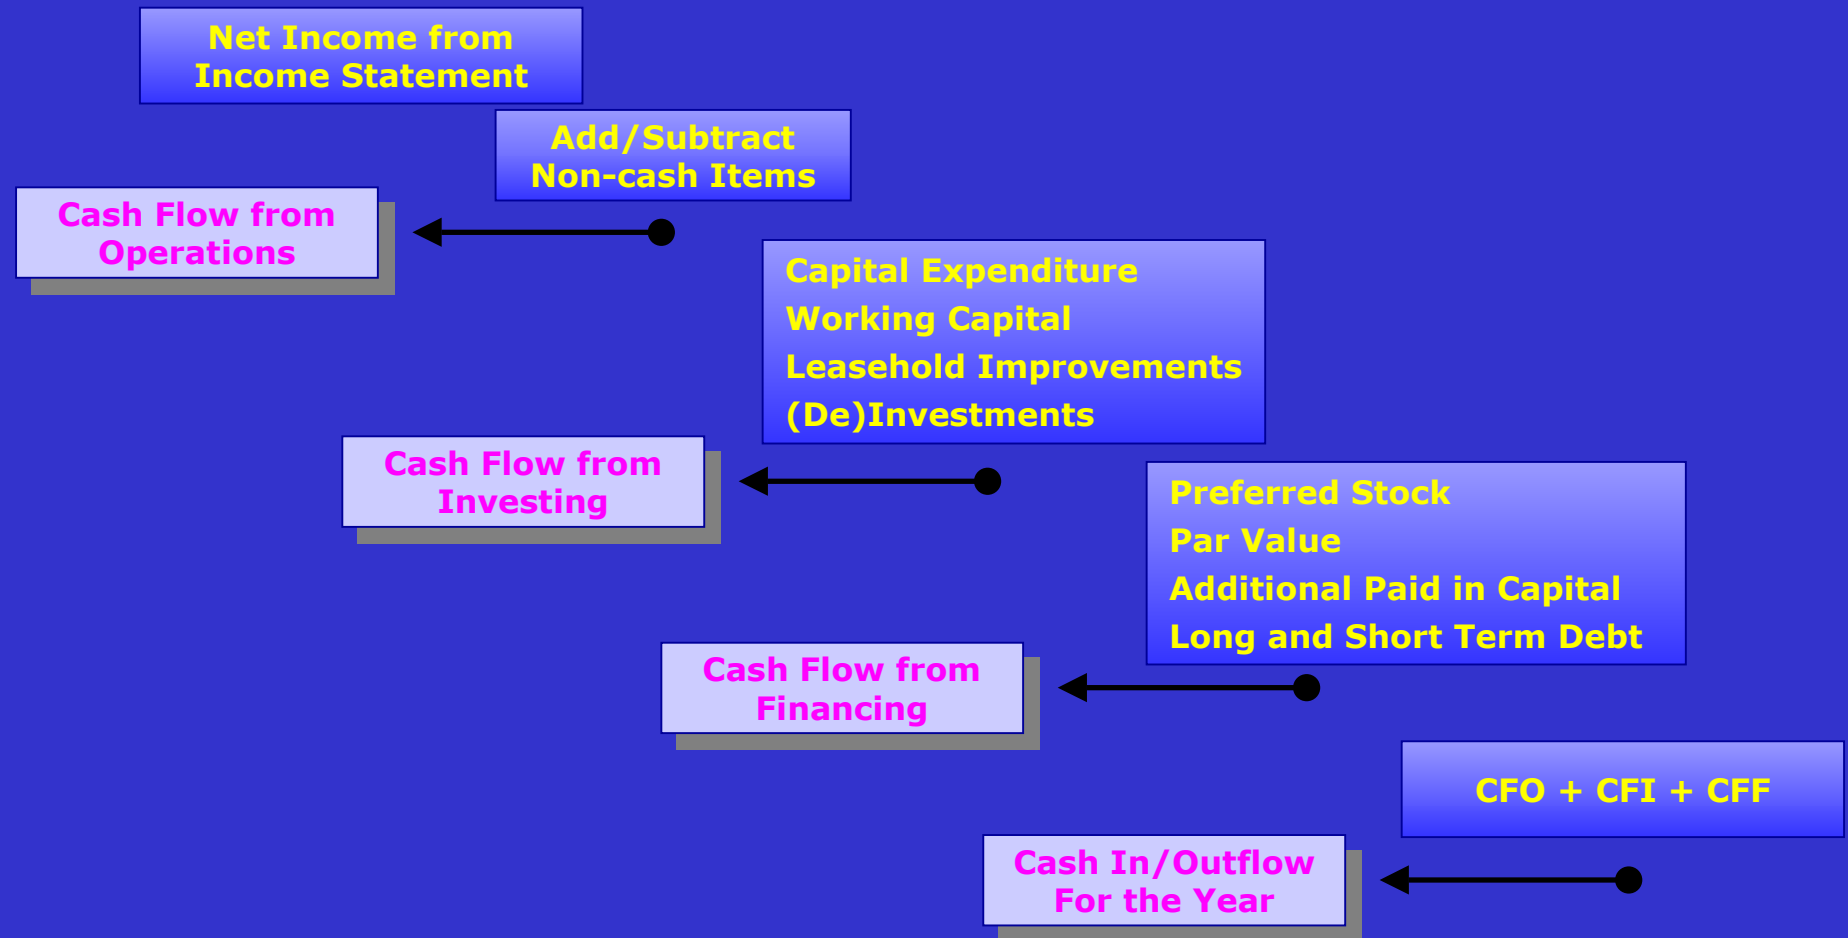

# Income Statement Demystified

**Case Study – A**

**Pre-Investment Analysis**

## Entrepreneur walked in the following Valuation Analysis

|                       | 2002                | 2003                | 2004               | 2005              | 2006              |
|-----------------------|---------------------|---------------------|--------------------|-------------------|-------------------|
| Operating cash flow   | (12,088,419)        | (13,288,859)        | 1,259,472          | 27,977,148        | 74,144,527        |
| Capital expenditures  | (1,342,100)         | (843,570)           | (2,282,739)        | (5,191,546)       | (3,528,695)       |
| <b>Free cash flow</b> | <b>(13,430,519)</b> | <b>(14,132,429)</b> | <b>(1,023,266)</b> | <b>22,785,602</b> | <b>70,615,832</b> |

| Risk Premium | NPV         | Terminal Disc Rate | Cash flow growth after year 5 |     |      |
|--------------|-------------|--------------------|-------------------------------|-----|------|
|              |             |                    | 11%                           | 13% | 15%  |
| 30%          | 7,837,461   | 25%                | 7.9                           | 9.4 | 11.5 |
| 40%          | 1,884,633   | 30%                | 5.8                           | 6.6 | 7.7  |
| 50%          | (1,737,885) | 40%                | 3.8                           | 4.2 | 4.6  |
|              |             | 50%                | 2.8                           | 3.1 | 3.3  |

| TERMINAL VALUE | Multiple of Terminal Value at<br>40% terminal discount rate |            |            | "Public Multiple" at<br>25% terminal discount rate |             |  |
|----------------|---|------------|------------|--|-------------|--|
|                | Risk Premium  | 3.8        | 4.2        | 4.6  | 9.4         |  |
| 30%            |   | 72,796,467 | 79,597,605 | 87,486,925   | 179,094,611 |  |
| 40%            |   | 50,255,880 | 54,951,124 | 60,397,607   | 123,640,030 |  |
| 50%            |   | 35,593,506 | 38,918,892 | 42,776,340   | 87,567,507  |  |

| Risk Premium | Value      |
|--------------|------------|
| 30%          | 80,633,928 |
| 40%          | 52,140,513 |
| 50%          | 33,855,621 |

# Why was the Analysis Irrelevant

---

- **Incorrect Valuation Methodology**

- Projecting Revenues 5 years out is a difficult proposition
- Discount Rates basic mathematical exercise

- **Irrelevant Comparables**

- Risk profiles comparison with company in a different stage
- Lack of market risk indicators (e.g. Beta)

- **Mismatched Investor Expectation**

- Terminal Value varied from 84% Minimum to 100% Maximum

- **Lack of Value-Additivity**

- Did not factor either business premiums or risk factors in to valuation analysis
-

# Digging in to the mechanics of the operations.....

# **First Level Analysis Clearly Profiled the Investment in High Risk Category, invalidating the entrepreneurs valuations**

## **Direct Indicators**

- **Cash Burn = \$73m**
- **4 Year Revenue CAGR = 300%**
- **Operating Income = 46%**
- **Number of Employees = 579**

## **Calculated Indicators**

- **Revenue per Emp. = \$260K**
- **Income per Emp. = \$127K**
- **Rev per Sales Emp. = \$3.5m**

## **Well Intended Business Proposition, but...**

- **High Funding Risk**
- **High Management Risk**
- **High Operational Risk**
- **Questionable Business Model**

## **Second Level Analysis Indicated Business Proposition was relevant but implementation was flawed...**

---

- **Revenue Mix Less than Optimal**
    - Two Revenue Drivers were placed sequentially
    - Consulting Revenue was a significant revenue driver
  - **Strategic Positioning was mis-matched**
    - Value proposition positioned the company as technology providers, but business model projected the company as project implementers
  - **Value-Growth Curve was Non-Linear**
    - The company need not have targeted for \$150m in revenues, and 579 employees
  - **Course of Action.....**
    - SASI worked with the entrepreneur to revamp the business model and used financial model as the tool
-

## **Based on the Second Level Analysis SASI worked with the entrepreneur to reduce the identified risks...**

---

- **Reduced of Financing risk by capping the capital requirements to a mutually agreed level**
  - **Reduced the Operational risk by making Projects team minimal and treating it as a cost center**
  - **Reduced Business Model risk by changing the revenue driver timing's**
  - **Could not minimize Management Risk, as the company was not yet mature to bring in a world class CEO**
-

## As an intermediate Scenario, Revenue ramp was reduced to a third BUT capital requirements was reduced to a fourth...

## **The final numbers indicated minimization of at least two of the three identified risks**

### **Direct Indicators**

- **Cash Burn = \$12m**
- **4 Year Revenue CAGR = 125%**
- **Operating Income = 55%**
- **Number of Employees = 125**

### **Calculated Indicators**

- **Revenue per Emp. = \$330K**
- **Income per Emp. = \$127K**
- **Rev per Sales Emp. = \$1.3m**

### **Well Intended Business Proposition, and...**

- **Low Funding Risk**
- **Unchanged Management Risk**
- **Low Operational Risk**
- **More Tuned Business Model**
