SAFETY SIGNS AND ACCESSORIES

Australians keeping Australia safe

Why you will love doing business with us

AUSTRALIAN MADE

Global Safety Signs is a division of Global Spill Control; an Australian owned and operated business proudly employing Australians to keep Australia safe.

QUALITY

In February 2016 we purchased a brand new range of state-of-the-art printers and cutters to produce signs and labels of the highest quality at the most efficient price point.

EXPERIENCE

Our team of professionals have many years' experience within the industrial sector and facilities management. We are not simply agents for a range of signs, but manufacturers with a complete range of signage printers, cutters, metal fabrication equipment and PVC welders.

CUSTOM SIGNS

If a standard sign does not meet your requirements, we can design and manufacture custom signs to your specifications, also ensuring they meet the relevant Australian Standards.

ENVIRONMENTAL MANAGEMENT

We are an environmental business at our core and therefore pride ourselves on considering the most environmentally-friendly option when purchasing, producing and disposing of materials. We aim to reduce our carbon footprint in all aspects of our business.

LOCAL WAREHOUSING

With a large range of standard signs in stock in our warehouse locations around Australia, we aim to deliver your signs faster than any other company on the market.

About Global safety signs

An introduction to safety signs

A well-designed symbolic safety sign should provide greater meaning visually than a sign with words. The aim of a safety sign should transcend the language barrier.

In Australia, there are several standards that guide the design and use of safety signs within the workplace. All Global safety signs have been designed and manufactured to comply with:

- **Australian Standard AS1319-1994: Safety signs for the occupational environment, and**
- **Australian Standard AS2293-2005: Emergency escape lighting and exit signs for buildings.**

Types and categories of safety signs

For simplicity and clarity, safety signs are divided into various types and categories. These are outlined below, together with a brief description.

Danger signs indicate the warning of a particular hazard or hazardous condition that is likely to be life threatening. These signs usually have a header depicted in red and black with the word danger.

Dangerous goods diamonds are used to indicate the nature and identity of a substance.

Emergency signs indicate the location of, or direction to, an emergency facility. Usually these signs are white symbols and text on a green background

Fire signs indicate the location of fire alarms and fire-fighting facilities. Usually these signs are white text and symbols on a red background.

Limitation or restriction signs (traffic management signage) place a numerical or other defined limit on an activity or use of a facility.

Mandatory signs indicate that an instruction must be carried out. These signs usually comprise blue round symbols on a white background.

Notice or facility management signs communicate instructions and provide direction to employees and the public. Signs are not governed by AS1319.

Prohibition signs indicate an action or activity that is not permitted. The symbol of the activity is shown surrounded by a red circle with a slash through the image.

Warning signs indicate a warning of a hazard or hazardous condition that is not likely to be life-threatening. (Previously the term 'caution' was used but has been replaced by the term 'warning').

Sign locations

A sign should be mounted in such a location that it cannot be obscured by stacked materials or other obstructions. The sign should not obstruct pedestrians or become a hazard itself.

For a symbolic sign, the recommended minimum viewing size should be 15mm per metre of viewing distance. The sign should be fixed so an adult should be able to see the sign directly in front of them at eye-level, or approximately 1.5m above the ground.

Below is a viewing distance guide that has been designed to help you select the correct size safety sign for your site or workplace.

If the sign is a regulatory or hazard sign, then it should be positioned so as to give the viewer enough time to act on the warning. If the sign refers to a switch or machine, the sign should be placed as close to the equipment as is safe and practicable. If the sign is in reference to a site or yard, it should be placed sufficiently in advance of any hazards within the area.

Signs should not be placed on moveable objects such as gates, doors or trolleys, where the sign may be moved out of sight or away from the relevant hazard.

Signs should be illuminated if the natural light or artificial light is not adequate. (Exit sign requirements are different and not covered in this set of guidelines).

Also consider the placements if more than one sign is required for a situation. It is important not to confuse the reader with too much information.

Signs should always be maintained, kept clean and kept well-illuminated. Most good signs will last five years, however UV degradation may occur. Signs may also rust or become damaged from impact. If these factors cause the sign to lose its efficacy, it must be replaced or the situation corrected.

Global safety sign materials

What material should I choose for my sign?

Global safety signs are available as standard in metal, polypropylene, corflute and self-adhesive vinyl labels. The guide below has been developed to help you select the most appropriate material for your sign and location.

- **METAL (COLORBOND STEEL)**

Colorbond metal sheets suit outdoor applications, particularly if the environment is subject to windy conditions. The 0.6mm sheet is made to Australian Standards and comes with rounded corners and pre-drilled mounting holes for your convenience. Colorbond has an outdoor life expectancy of up to eight years and an optimal service range of -40°C to +80°C.

- **POLYPROPYLENE**

UV-stable 1.4mm polypropylene signs are ideal for use both indoors and outdoors. Polypropylene has the advantage of not reacting with most chemicals and is resistant to fading and cracks. It is ideal for temperatures between -5°C and +90°C and has a likely outdoor service life of up to five years.

Global's polypropylene is made from 50% recycled material and can be 100% recycled after use.

- **CORFLUTE**

Corflute is a lightweight, twin-walled sign material. It is low-cost yet still durable and is ideal for short-term outdoor use, such as construction sites or temporary situations.

- **SELF-ADHESIVE LABELS (VINYL)**

High quality vinyl self-adhesive labels perform well in environments ranging from -50°C to +90°C. They can be used both indoors and outdoors, with an outdoor service life of up to four years and indoor service life up to eight. It is vital that self-adhesive labels are applied to a clean, dry surface.

- **ALUMINIUM**

Aluminium provides greater corrosion resistance than standard metal signage. It is also non-magnetic and is often selected around electrical installations. The life expectancy of an aluminium sign is 20 years with optimal service range between -100°C and +100°C.

Does your sign need to be written in another language?

If a sign includes words which convey its meaning, and this sign may be viewed by persons unfamiliar with the English language, it may be necessary to repeat the message in one or more languages.

Global safety signs can be custom-made to include multi-lingual messages - speak with our team for more information.

REMEMBER TO TRAIN YOUR PEOPLE!

As the purpose of a safety sign is to draw attention to an issue affecting health and safety, it is important to cover signage and visual warnings within induction programmes. It is also important to communicate to employees any changes to signage prior to the change carried out.

Danger signs are used to warn of a hazard which is likely to be life-threatening.

This category includes our core range of danger signs however we can also produce danger signs with custom messages upon request.

Our danger signs are made to the specifications of AS1319-1994 and are available in a variety of standard sizes. They can be manufactured on metal, polypropylene or corflute material, or can alternatively be supplied on self-adhesive vinyl labels. Aluminium signs are also available upon request.

Standard sizes and materials are listed in the table below each sign, along with the relevant part code.

| Size | Material | Code |
|---------------|----------|----------|
| 600mm x 450mm | Metal | SSD-CTAM |

USING CUSTOM TEXT ON DANGER SIGNS

Danger signs can only state messages which are classified as hazard warnings and the situation is likely to be life-threatening.

For example, LIVE WIRES KEEP AWAY is a warning about a certain hazard and/or action whereas DO NOT ENTER LIVE WIRES is more a command, law or direction and classes as a regulator sign.

Symbols are not used on danger signs - if a symbolic sign is required, it must be a separate sign placed either to the side or below the danger sign.

Emergency information signs are designed to indicate the location of or the direction to an emergency facility.

Emergency information signs are usually green in colour with white text and icons. This range also includes two EMERGENCY STOP signs which are coloured red.

This category includes our core range of emergency information signs however we can also produce customised messages on request.

Our emergency signs are made to the specifications of AS1319-1994 and are available in a variety of standard sizes. They can be manufactured on metal, polypropylene or corflute material, or can alternatively be supplied on self-adhesive vinyl labels. Aluminium signs are also available upon request.

Standard sizes and materials are listed in the table below each sign, along with the relevant part code.

| Size | Material | Code |
|---------------|----------|----------|

EXTRA INFORMATION FOUND ON EMERGENCY SIGNS

Additional information to support pictograms is often found on emergency signs in order to meet minimum comprehension levels. Examples of this include arrows and explanatory text.

For example, it is recommended that washing times are added to signs regarding eyewash stations and emergency showers, as washing times are frequently underestimated.

Fire signs are used to advise the location of fire alarms and fire-fighting facilities.

Fire signs are rectangular in shape with a red background and white text and symbols.

This category includes our core range of fire signs, however we can also produce fire signs with custom messages upon request.

Our fire signs are made to the specifications of AS1319-1994 and are available in a variety of standard sizes. They can be manufactured on metal, polypropylene or corflute material, or can alternatively be supplied on self-adhesive vinyl labels. Aluminium signs are also available upon request.

Standard sizes and materials are listed in the table below each sign, along with the relevant part code.

Mandatory signs are regulatory signs which advise of instructions that must be carried out.

Most mandatory signs feature a white pictogram within a blue circular disk, together with black wording displayed on a white rectangular background. Some do not include the pictogram and only feature text - these particular signs are always manufactured in portrait format.

Multi-message versions are also available which allow up to four pictograms with a common message.

Our mandatory signs are made to the specifications of AS1319-1994 and are available in a variety of standard sizes. They can be manufactured on metal, polypropylene or corflute material, or can alternatively be supplied on self-adhesive vinyl labels. Aluminium signs are also available upon request.

Standard sizes and materials are listed in the table below each sign, along with the relevant part code.

USING TEXT ON MANDATORY SIGNS

Although the mandatory signs shown in this catalogue all include supplementary text, mandatory pictograms can be used as a sign on their own.

Be mindful that these pictograms could be misinterpreted therefore using supplementary text clarifies which type or specific style of equipment should be used.

Mandatory signs can also be supplied as a multiple message sign.

Choose from either the standard pre-designed multi-message signs directly below or customise your own by selecting four of the 16 pictograms further down the page.

Multiple message mandatory signs are 900mm x 600mm and designed to hold four circular pictograms. Each pictogram measures 200mm (diameter).

Please advise which pictograms you require (including their order of appearance) when placing your order.

Notice signs are used to communicate general information regarding company information, house-keeping, instructions or other messages that assist both visitors and personnel on your site.

There is no Australian Standard for notice signs, however they are included due to their general nature and mass application.

This category includes our core range of notice signs, however we can also produce signs with custom messages upon request.

Notice signs are available in a variety of standard sizes. They can be manufactured on metal, polypropylene or corflute material, or can alternatively be supplied on self-adhesive vinyl labels. Aluminium signs are also available upon request.

Standard sizes and materials are listed in the table below each sign, along with the relevant part code.

Prohibition signs are used to indicate that an action or activity is not permitted.

These signs feature a symbolic shape comprising a red annulus and slash symbol with a plain white interior. Black wording may be placed below and where appropriate, a black pictogram is placed behind the red symbol.

The no smoking sign is a common prohibition sign found in many locations.

Our prohibition signs are made to the specifications of AS1319-1994 and are available in a variety of standard sizes. They can be manufactured on metal, polypropylene or corflute material, or can alternatively be supplied on self-adhesive vinyl labels. Aluminium signs are also available upon request.

Standard sizes and materials are listed in the table below each sign, along with the relevant part code.

Custom signs can be manufactured upon request.

Warning signs are used to indicate warning of a hazard or hazardous condition that is not likely to be life-threatening.

These signs are yellow in colour with black text and icons. All icons are housed within a black triangle.

Warning signs have been previously known as 'caution signs' but this terminology is no longer used by the Australian Standard. The terms 'warning' and 'caution' are now regarded as being interchangeable however.

This category contains our core range of warning signs, however we can also produce signs with your own custom message.

Our warning signs are made to the specifications of AS1319-1994 and are available in a variety of standard sizes. They can be manufactured on metal, polypropylene or corflute material, or can alternatively be supplied on self-adhesive vinyl labels. Aluminium signs are also available upon request.

Standard sizes and materials are listed in the table below each sign, along with the relevant part code.

Dangerous goods diamond signs

Hazardous warning signs in the form of dangerous goods diamond signs are important for areas where dangerous goods are transported or may be stored.

Our range of hazard signs include dangerous goods diamond signs, in addition to EMERGENCY INFORMATION PANELS used for both storage and transport.

The dangerous goods diamond signs are categorised according to their classification and can be added onto an emergency information panel with customised details - simply contact us to arrange this.

Our dangerous goods signs are made to the specifications of AS1319-1994 and are available in a variety of standard sizes. They can be manufactured on metal, polypropylene or corflute material, or can alternatively be supplied on self-adhesive vinyl labels. Aluminium signs are also available upon request.

Standard sizes and materials are listed in the table below each sign, along with the relevant part code.

The range below illustrates a small sample of the facilities signage available.

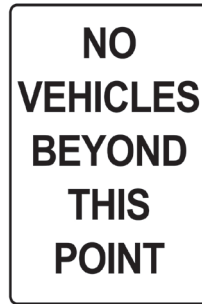

Our most popular signs are shown on this page, however we can custom make any signs according to your requirements. Contact us to discuss your project and let us take care of manufacturing and delivering the right signs for your facility.

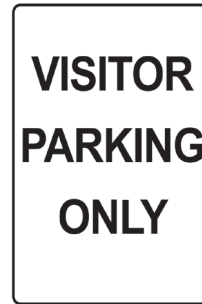

450mm x 600mm
Type: metal
Code: SSFM-NPAM

450mm x 600mm
Type: metal
Code: SSFM-NSAM

450mm x 600mm
Type: metal
Code: SSFM-NVAM

450mm x 600mm
Type: metal
Code: SSFM-VPAM

450mm x 600mm
Type: metal
Code: SSFM-DPAM

450mm x 600mm
Type: metal
Code: SSFM-EOAM

450mm x 600mm
Type: metal
Code: SSFM-EXOAM

300mm x 450mm
Type: poly
Code: SSFM-RLBP

300mm x 450mm
Type: poly
Code: SSFM-RGBP

300mm x 450mm
Type: poly
Code: SSFM-RBP

450mm x 600mm
Type: metal
Code: SSFM-S5AM

450mm x 600mm
Type: metal
Code: SSFM-S10AM

450mm x 600mm
Type: metal
Code: SSFM-S15AM

450mm x 600mm
Type: metal
Code: SSFM-S20AM

450mm x 600mm
Type: metal
Code: SSFM-S25AM

Visual warning tools

This page contains a snapshot of our most popular visual warning tools which are ideal for sites and the workplace.

A larger range of items can be found online at www.globalspill.com.au.

A-frame floor stands

Double-sided plastic A-frame with printed caution message. Other designs are available, please contact us for more information.

- Wet floor Part code: SSAY-WF
- Watch your step Part code: SSAY-WYS
- Out of service Part code: SSAY-OOS
- Do not enter Part code: SSAY-DNE

Plastic chain

Red and white plastic chain sold in 25 metre sections.

Part code: PCRW25

Traffic paddle

Red and white STOP sign with yellow and black SLOW sign on reverse.

- 600mm diameter
- Aluminium handle

Part code: SSTP

Document storage holder - hi-vis poly

Safely store SDS, instruction manuals, records, logs etc.

Water & weather resistant polyethylene construction.

Part code: SCDHPEY007

Document storage holder - aluminium

Safely store SDS, instruction manuals, records, logs etc.

Tough aluminium construction for extreme conditions.

Part code: SDSHA

SDS binder

Store safety data sheets in this clearly identifiable yellow and black 2D ring binder.

Part code: SDSBINDER

Barrier tape

Use to keep spill area safe and secure. Features words CAUTION SPILL AREA in black type on yellow background.

Part code: TAPEC50X75
