

## **Inpatient Medicine Progress Notes for COVID19**

Every day, inpatients must be rounded on by their physician  
Routine physical exam is not necessarily required unless clinically indicated  
Include COVID-specific care assessment, comorbidities in Issues/Plans format  
All daily notes should verify consideration of VTE prophylaxis, that GOC is documented and discharge planning is ongoing including mobilization and disposition.

### Documentation of MD assessment

There are two options for progress notes, paper chart or SCM.

Paper progress note can be used, kept in paper chart. Must be taped in to multidisciplinary progress note (ask unit clerk to print and tape). Must have patient ID/sticker.  
If paper progress note used, a daily summary **MUST** be logged in the SCM discharge summary to facilitate the discharge. This summary can be brief to document relevant events of the day.

SCM can be used for daily progress notes using Notecetera Token

Discharges will be completed in SCM using a discharge summary document.
