

Algebra 1 CP Unit 1: Two-Variable Linear Equations

Unit #:	APSDO-00018608	Duration:	6.0 Week(s)	Date(s):	
----------------	----------------	------------------	-------------	-----------------	--

Team:

Melinda Litke (Author), Tracy Andreana, Sally deGozzaldi, Michael Fernandes, Jennifer Greene, Jeanine LaBrosse, Jaclyn Lawlor, Melinda Litke, Ben Lukowicz, Jennifer Miller, Matthew Mooney, James Murray, Marlaina Napoli, Andrew Riddle, Steven Rivoira, Donna Beaudoin, Nicole Gresh, Steven Muench

Grades:

9

Subjects:

Mathematics

Unit Focus

In this unit, students will utilize function notation to solve linear functions, construct graphs using tables and patterns, and identify x- and y-intercepts. They will determine slopes of lines using graphs, tables, equations and use the slope formula. They will graph linear equations, write equations from tables, graphs and story problems. They will write the equation of a line given various information. They will transform the equation of a line into slope-intercept form as well as write equations of parallel and perpendicular lines. Students will understand the terminology associated with linear functions including domain/range and input/output. They will understand that slope is a rate of change that affects the steepness of the graph, including the special relationships of parallel and perpendicular lines. They will use all three forms of a linear equation and understand the relationships between them. Students will study the relationships between two sets of data and use graphing calculators to explore linear regression. Summative assessments may include projects, labs, and tests. Primary instructional materials for this unit include Algebra I, Glencoe/McGraw Hill, 2014.

Stage 1: Desired Results - Key Understandings

Established Goals	Transfer
<p>Common Core <i>Mathematics: 9</i></p> <ul style="list-style-type: none"> Determine an explicit expression, a recursive process, or steps for calculation from a context. <i>CCSS.MATH.CONTENT.HSF.BF.A.1.A</i> Graph linear and quadratic functions and show intercepts, maxima, and minima. 	<p>T1 (T22) Describe and/or solve problems using algebraic expressions, equations, inequalities, and functions.</p> <p>T2 (T23) Use functions or equations to model relationships among quantities.</p> <p>T3 (T50) Based on an understanding of any problem, initiate a plan, execute it and evaluate the reasonableness of the solution.</p> <p>T4 (T53) Articulate how mathematical concepts relate to one another in the context of a problem or in the theoretical sense.</p> <p>T5 (T51) Examine alternate methods to accurately and efficiently solve problems.</p> <p>T6 (T52) Use appropriate tools strategically to deepen understanding of mathematical</p>

<p><i>CCSS.MATH.CONTENT.HSF.IF.C.7.A</i></p> <ul style="list-style-type: none"> Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then $f(x)$ denotes the output of f corresponding to the input x. The graph of f is the graph of the equation $y = f(x)$. <p><i>CCSS.MATH.CONTENT.HSF.IF.A.1</i></p> <ul style="list-style-type: none"> Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table). <p><i>CCSS.MATH.CONTENT.HSF.LE.A.2</i></p> <ul style="list-style-type: none"> Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales. <p><i>CCSS.MATH.CONTENT.HSA.CED.A.2</i></p> <ul style="list-style-type: none"> Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes. <p><i>CCSS.MATH.CONTENT.HSA.REI.D.12</i></p> <ul style="list-style-type: none"> Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context. <p><i>CCSS.MATH.CONTENT.HSF.IF.A.2</i></p> <ul style="list-style-type: none"> For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. 	<p>concepts.</p> <table border="1"> <thead> <tr> <th colspan="2">Meaning</th></tr> <tr> <th>Understandings</th><th>Essential Questions</th></tr> </thead> <tbody> <tr> <td> <p>U1 (U203) Certain mathematical manipulations preserve the relationship in an expression or equation, even though they change the representation.</p> <p>U2 (U205) Expressions, equations, inequalities, and functions use symbols to represent quantities, operations, and their relationships.</p> <p>U3 (U209) Algebraic relationships can be represented by analytical geometry.</p> <p>U4 (U540) The choice of a mathematical tool depends upon the information you have and the information you want.</p> <p>U5 (U550) Attention to detail, such as specifying units of measure and labeling, leads to clarity in expressing mathematical information.</p> <p>U6 (U560) Patterns and structures are characterized by consistent relationships.</p> <p>U7 (U561) Recognition of patterns and structures fosters efficiency in solving problems.</p> </td><td> <p>Q1 (Q205) How can I represent this relationship as a function or equation?
