Modern Technology

Not too long ago, everyday life was filled with burdensome, time-consuming chores that left little time for much more than completing these tasks. People generally worked from their homes or within walking distance to their homes and rarely traveled far from them. People were limited to whatever their physical capacities were. All this changed dramatically as new technologies developed. Modern technology has most improved our lives through convenience, efficiency, and accessibility.

Almost every aspect of modern life has been improved through convenience provided by technology. From the alarm clock in the morning to the entertainment center at night, everyday life is improved. The automatic coffee maker has the coffee ready at a certain time. Cars or public transportation bring people to work where computers operate at the push of a button. At home, there's the convenience of washing machines and dryers, dishwashers, air conditioners, and power lawn mowers. Some people say the conveniences are not worth the extra cost and effort keeping these devices working, but, overwhelmingly, people opt to use them. Modern technology has made life better with many conveniences.

Not only has technology improved our lives through convenience, it has improved lives through efficiency. The time saved by machines doing most of the work leaves more time for people to develop their personal goals or to just relax. Years ago, when doing laundry could take all day, there wasn't time left over to read or go to school or even just to take a leisurely

walk. The opposing view might argue that people misuse their increased free time sitting around and watching television. While some people have health problems as a result of technology, by far, lives are improved. Nowadays, people have more time and energy than ever to simply enjoy their lives and pursue their goals thanks to the efficiency of modern technology.

Accessibility to a wide range of options has been expanded through modern technology. Never before could people cross a continent or an ocean in an afternoon. Travel is not the only way technology has created accessibility. Software which types from voice commands has made using computers more accessible for school or work. People with special needs have many new options thanks to modern technology such as special chairs or text readers. Actually, those people who need hearing aids as a result of normal aging have access to continued communication and enjoyment of entertainment they did not previously have. There are many ways technology has improved lives through increased accessibility.

Modern technology has created many conveniences in everyday life from waking up to music to having coffee ready to getting to work and doing a day's work. The efficiency provided by technology gives people more time to enjoy life and pursue personal development, and the accessibility has broadened options for travel, school, and work. Life has been improved with modern technology through convenience, efficiency, and accessibility.

Notes on formatting:

1. Essays must have margins, line spacing, font, header, and heading as per MLA Page Format, a file found in Documents
2. See how this essay has an introduction paragraph containing background information leading up to a thesis at the end, three body paragraphs which prove the thesis, and a concluding paragraph which sums up the proof and restates the thesis.
3. The first line of each body paragraph is a topic sentence which supports the thesis. The content of each paragraph develops the topic sentence.
