These materials were produced by Educational Testing Service<sup>®</sup> (ETS<sup>®</sup>), which develops and administers the examinations of the Advanced Placement Program for the College Board. The College Board and Educational Testing Service (ETS) are dedicated to the principle of equal opportunity, and their programs, services, and employment policies are guided by that principle.

The College Board is a national nonprofit membership association dedicated to preparing, inspiring, and connecting students to college and opportunity. Founded in 1900, the association is composed of more than 4,200 schools, colleges, universities, and other educational organizations. Each year, the College Board serves over three million students and their parents, 22,000 high schools, and 3,500 colleges, through major programs and services in college admission, guidance, assessment, financial aid, enrollment, and teaching and learning. Among its best-known programs are the SAT<sup>®</sup>, the PSAT/NMSQT<sup>®</sup>, and the Advanced Placement Program<sup>®</sup> (AP<sup>®</sup>). The College Board is committed to the principles of equity and excellence, and that commitment is embodied in all of its programs, services, activities, and concerns.

Write in the box the number of the question you are answering on this page as it is designated in the examination.

a) Capital flows into the US from Japan would increase because Japanese investors would want to keep their money where they would get the highest possible returns. The higher interest rates in the US would give them higher returns than if they kept their money in Japanese banks.

Because Japanese investors would need dollars to keep in US banks, the demand for dollars would increase. This would cause the dollar to get stronger and appreciate.

Also, the supply of Yen would increase and ~~the~~ the Yen would depreciate.

c) i) Imports from Japan would increase because the yen is weaker, and the goods would seem relatively cheaper to US consumers.

ii) Exports to Japan would decrease because the dollar is stronger and the US products would appear relatively more expensive to Japanese consumers.

Write in the box the number of the question you are answering on this page as it is designated in the examination.

3 MACCLL,

3

(a) An increase in interest rates in the United States would create a net capital inflow.

Investors in Japan would invest money in the United States because interest rates are higher.

This would move more money into our financial markets creating net capital inflow.

~~The~~ Japan would have a net capital outflow as they invested money in the U.S. The capital account would become bigger in the US and consequently the current account would get smaller.

(b)

If the value of the dollar increases, the value of the yen decreases. As  $d_1$  goes to  $d_2$ , the value of the yen is pulled down. If the value of the dollar decreases, then the value of the yen would increase. ~~If the dollar is stronger, then people will want to invest~~ If a dollar will suddenly be able to buy more yen, the value of the yen is decreased. It would then

Write in the box the number of the question you are answering on this page as it is designated in the examination.

require more yen to purchase a dollar.

This shows the value would decrease.

One yen would buy less of a dollar.

~~(C)~~ Because the dollar is strengthened in this case, the yen would ~~be lowered~~ ~~or~~ be depreciated.

(C) (i) The ~~depreciation~~ of lower value of the yen would cause an increase of imports from Japan coming to the United States. The dollar would be able to buy more product from Japan because it would be strengthened.

(ii) Exports from the US to Japan would decrease. Japan would not want to buy from the US because it would cost more yen to a dollar to buy products. It would, ~~in a sense,~~ increase the cost of US exports in Japan.
