Report Title: Women's Safety Audit Report

Date: February 25, 2025

Location: Metro City Public Spaces

Prepared By: Diana Rodriguez, Women's Safety Advocate

Executive Summary

This report presents the findings from a safety audit of public spaces in Metro City, focusing on the safety and security of women. It identifies areas of concern, evaluates existing safety measures, and offers recommendations to enhance women's safety in these spaces.

Introduction

The purpose of this report is to assess the safety of women in public spaces across Metro City. This audit was initiated due to increasing concerns about women's safety and aims to propose effective strategies to improve security and ensure a safer environment for all women.

Incident Details

- **Date of Audit:** February 1-20, 2025
- **Locations Audited:** Parks, public transit systems, and shopping districts
- **Type of Audit:** Women's Safety and Security Evaluation

Incident Description

The audit involved observing the conditions of various public spaces and interviewing women about their experiences and perceptions of safety in these areas. Several key issues were identified, including poor lighting, lack of security personnel, and isolated spots that are perceived as unsafe.

Cause Analysis

The primary safety concerns highlighted by the audit include:

- Insufficient lighting in several parks and walking paths, particularly after sunset.
- Sparse deployment of security personnel, especially in larger parks and at transit stations during off-peak hours.
- Inadequate surveillance and emergency response mechanisms in many shopping districts.

Impact Assessment

These safety gaps potentially increase the risk of harassment and other forms of violence against women, thereby deterring their participation in community life and restricting their mobility.

Recommendations

1. Enhance lighting in all public parks, walking paths, and transit areas to improve visibility and deter potential threats.
2. Increase the presence of security personnel during evening hours and in high-risk areas.
3. Implement community-based safety programs that engage local residents and businesses in keeping their neighborhoods safe.

4. Install more emergency call points and improve surveillance systems across key public spaces.

Appendices

Appendix A: Detailed Survey Responses

Appendix B: Safety Audit Checklist and Findings

Appendix C: Proposed Budget for Safety Improvements
