

# HSE Statistics Report

---

## Title Page

**Report Title:** Health, Safety, and Environment (HSE) Statistics Report – February 2025

**Prepared for:** HSE Management Team

**Prepared by:** Safety Compliance Department

**Date:** March 3, 2025

## Abstract

This report presents an analysis of workplace health, safety, and environmental (HSE) performance for February 2025. It includes key safety indicators such as incident rates, near-miss reports, compliance levels, and environmental impact assessments. The goal is to evaluate workplace safety performance, identify areas for improvement, and recommend preventive measures.

## Table of Contents

1. Abstract
2. Introduction
3. Methodology
4. Results
5. Discussion
6. Conclusion
7. References
8. Appendices

## Introduction

Background: Ensuring workplace safety and environmental responsibility is a core objective of the organization. Regular HSE reporting helps track compliance, assess risks, and implement corrective actions.

Objectives: To analyze workplace incidents, near misses, and environmental compliance, and to identify trends that may require safety interventions.

Scope: The report covers all operational sites for February 2025, comparing data with the previous month and industry benchmarks.

## Methodology

Data Collection: Incident reports, safety audits, and environmental assessments were compiled from company records and regulatory compliance reports.

Data Analysis: Key performance indicators (KPIs) such as Lost Time Injury Frequency Rate (LTIFR), Total Recordable Incident Rate (TRIR), and environmental emissions were analyzed using statistical tools.

## Results

Workplace Incidents:

- **Total incidents:** 5 workplace injuries, a **10% decrease** from January.
- **Lost Time Injuries (LTI):** 2 cases, maintaining the **LTI rate at 0.5 per 100,000 hours worked**.
- **Near-miss reports:** 12 cases, showing a **15% increase**, indicating better reporting culture.

Environmental Impact:

- **CO<sub>2</sub> emissions:** Reduced by **5%** due to improved energy efficiency measures.
- **Waste management compliance:** Achieved **100% compliance** with disposal regulations.

Safety Training and Compliance:

- **Safety training participation:** 92% of employees completed mandatory training.
- **PPE compliance:** 98% compliance recorded in safety inspections.

Visual representations such as bar graphs and pie charts illustrate trends in incident rates, near-miss reports, and compliance levels.

## Discussion

The decrease in workplace injuries suggests that safety measures are improving. However, the increase in near-miss reports indicates greater awareness but also highlights areas where preventive actions are still needed. The reduction in CO<sub>2</sub> emissions is a positive step towards sustainability goals. Continued focus on training and proactive hazard identification is recommended.

## Conclusion

The overall HSE performance for February 2025 shows positive trends in incident reduction and environmental compliance. To further improve safety, additional focus on hazard identification, risk assessment, and worker engagement is necessary. Future action plans should include regular refresher training, safety audits, and enhanced monitoring of environmental impact metrics.
